

North Forty Area Protection League Inc.

a non-profit organization

Newsletter August 12, 2001 #001

Mission: To Expose those who threaten the rights and liberties of those around themselves, with no regard or consideration for truth or justice.

Common Sense: We who live on and around the Neosho Road area north of Casper have tried to live amongst clouds of gas, smoke, pyrotechnics, explosions, fires, burning lips, burning eyes, and lies. We can't take much more. We were told in 1999 that they had no need to test outside any more and would never do any more testing here north of town because they had a place over in Lusk. This promise came through the Denver office of the E.P.A. after they had done some sort of investigation or inquiry. Now guess why we are upset.

Past Event:: On Sunday August 8th our first official meeting was held on Buckskin Rd. Those attending voted to adopt the name North Forty Area Protection League that all who live north of Casper who feel the need may join and partake. Elections were then held for officers. Those nominated were seconded, then voted on by all present of voting age. Results are as follows.

President	George Pridham
Vice President	Bryan Kohtala
Secretary	Kathy Mayo
Treasurer	Mary Steadman

Thank You: To attorney Ronald Pretty of Cheyenne Wyoming for setting up our organization as a non-profit group on a pro bono basis.

Special Gratification : To Ms. Joyce Ackerman of the E.P.A. Denver office. Ms. Ackerman had additional test taken Monday July 30th on the soil. More recently she with the cooperation of the Natrona County/Casper Health Department gave opportunity for 15 area families to receive blood and urine tests on specified suspect chemicals. We all pray these tests may find a key to health and peace of mind to all in the area.

A Plea to You: Mr Robert Harrington of the Natrona County/Casper Health Department Along with Ms. Ackerman of the E.P.A. need you and your family to allow access to your medical record with a signed release. This is to find all who might be affected by any possible pollutants that might be in the North Forty area. Your privacy will be held in highest regard, they have assured us of this.

Green Beef & Eggs: Tom and Kathy Mayo's beef has been tested for a bacteria/bacterium and it has shown negative. We have been led to believe that these results point to some kind of chemical contamination. The beef samples have been forwarded to the Center For Disease Control for further testing.
